PROJECTS

MyMovies - API
CareerFoundry   *August 2022 - September 2022*
- Designed and deployed a Restful API for MyMovies, which retrieved and displayed information on 10 movies including director and genre.
- Implemented authentication using tools such as Axios, Bcrypt and JSONToken, resulting in 90% improvement in data security and authentication.
- Developed a caching system that improved performance in load time by 90%.

Chatty App - React Native Mobile App
CareerFoundry   *November 2022 - December 2022*
- Built a chat app for mobile devices using React Native with a focus on serverless.
- Integrated Firebase authentication and chat functionality for online and offline mode.
- Once requirements were met differentiated myself with UI layout design.

Creavio.io | AI content generator for online creators
Project   *March 2023*
- Implemented a highly secure and efficient API system, addressing route rate limits, sensitive data protection, and a comprehensive API key system with Google authentication and Typescript.
- Incorporated modern design features, including Radix UI Primitives, Tailwind CSS, next/font, and Lucide icons, to create visually appealing interfaces.
- Integrated ChatGPT AI to help generate content for users ranging from keywords generation to outlining blog ideas.

Brayancodes.com
Portfolio   *March 2023*
- Leverage Nextjs's dynamic route system to create highly flexible and scalable website, enabling efficient management of content and seamless navigation for users.
- Employed Sanity.io as the content management system, enabling easy and efficient content updates, including blog posts and projects.
- Utilized Framer Motion to introduce captivating animations and enhance the overall interactivity od the website, delivering a visually stunning and engaging user interface.
